PLASTIC STORAGE AND TRANSPORT CONTAINERS DIRECTLY FROM THE MANUFACTURER

WAVE

THERE
FINDING
SOLUTION

AUER Packaging – A Bavarian success story

Founded in Kraiburg, Germany, in 1985, AUER Packaging is now one of the leading companies in the field of plastic container production. The success of AUER Packaging is down to a combination of innovative ideas, high-quality materials and workmanship, and a keen instinct for new opportunities and niches in the market. Innovation is a top priority at AUER Packaging.

Based in the Upper Bavarian town of Amerang, the company distributes its high-quality plastic storage and transport solutions across the world. An ever-expanding network of exclusive partners and authorised distributors sells the products locally, but the products are exclusively "made in Germany". These extremely simple and direct sales structures, which avoid wholesalers, enable AUER Packaging to operate more cost-effectively than other providers on the market.

ABOUT AUER PACKAGING

FIND OUT MORE

BEST QUALITY MADE IN GERMANY

Our high-quality, robust transport and storage containers are developed and manufactured exclusively in Germany. Our wide range of products is manufactured on computer-controlled machines in our modern plants in Amerang and Hohenpeißenberg, where innovations are promptly put into practice. This way we ensure best quality, economical production and flexibility.

We use only new material of 1A quality for the production of our containers. As no recycled materials are used in the production, we can guarantee a constantly very high product-quality to our customers.

We use different materials for different requirements and applications with regard to e.g. temperature stability, weight-bearing capacity, impact resistance, suitability for cleaning plants etc. Naturally, the transport containers produced by AUER Packaging are optimized for automatic handling.

TOP QUALITY AT A REASONABLE PRICE – DIRECTLY FROM THE MANUFACTURER!

Transport containers manufactured by AUER Packaging are adapted exactly to the needs of modern transport. National and international standards for modern logistics were taken into consideration in the development stage. The dimensions offered are compatible with customary pallet sizes. Our containers are extremely robust – and at the same time surprisingly light! With thought-out detailed solutions and functional accessories they fulfil the varied demands of a vast number of industries.

You buy AUER transport containers directly from the manufacturer and therefore at extremely good prices – without any additional surcharges! Individual requests such as printing or special models can be coordinated and realised directly

SERVICE WITH A CERTIFICATE!

Since August 2014, our quality management has been certified in accordance with ISO 9001. This ensures that all processes and procedures are organised according to precise guidelines. For you that means specifically: We complete all orders quickly and reliably – our order lead times cannot be beaten! Since we focus on direct support without field sales agents, we can work more rationally and quickly – and of course more cheaply to fill your order.

We would be happy to advise you on your transport requirements over the phone and propose solutions – if desired we can also offer individual, custom-made products. Additionally, all our products are available at the carton price in the smallest quantities from as little as just one unit.

Proven a million times – The classic

Practical, reliable and proven a million times: those who want to create order using simple means need look no further than the AUER container in Euro format.

The basic dimension of the next highest size is the result of two smaller containers positioned lengthways next to one another. This simple system ensures maximum flexibility: different Euro containers can be stacked in virtually any combination – precisely optimised for the basic dimension of the Euro pallet (120 x 80 cm) and ISO pallet (120 x 100 cm).

At AUER Packaging, the choice is yours: classic with closed walls and base, perforated (for example for baked goods or for use in dishwashers), with hinged lids or as a case with lid, hinges and handles. And to protect your goods, we offer a loose lid for Euro pallets.

EURO CONTAINERS / CLOSED SURFACE

ORDERLINESS TO SUIT YOUR REQUIREMENTS

The practical Euro boxes manufactured by AUER PACKAGING are ideal for use wherever hygienic stackable plastic containers play an important role in transport and storage.

- available in all popular sizes
- not sensitive to acids and alkaline solutions
- cold- and heat-resistant

- optimal handling due to ergonomic handles
- also suitable for conveyor systems

Also in ESD-Version available.

The latticed euro containers by AUER Packaging have effective ventilation slots – a great advantage for transporting and storing foodstuffs. Additionally, liquids can drain from the plastic container easily, and dampness will not accumulate. When stacked, it can be determined quickly whether the container is full or empty.

All these containers are hygienically flawless and easy to clean.

EURO CONTAINER CASE

ONE OR TWO HANDLES ON THE LONG SIDE

Handles on the long sides turn the AUER Euro containers, proven a thousand times over, into practical and robust carrying cases – they can be carried like a traditional suitcase with one handle, or the handles on both long sides can be used to carry heavy content with two hands.

- Also stackable with lids
- Lid with two hinges and two lock handles
- Handles can be placed optionally on one or both sides

80 x 60 x 43,5	ED 86/42 3G	10

Maximised mobility – made easy

In this way, you do not need a forklift to effortlessly transport your goods in Euro containers onto transporters or through the storage facility: transport rollers for the basic dimensions 60 x 40 and 80 x 60 cm even accommodate higher container stacks safely and free from risk of tipping with their raised edges.

The smooth-running, high-quality rollers are optionally available in polyamide or rubber, making them run especially smoothly and softly even on rough surfaces. As additional options for individually tailoring the rollers to your specific requirements, you can choose from fixed or swivel wheels, stainless steel mounts, brakes for locking into position and an integrated thread guard.

TRANSPORT TROLLEYS 60 X 40

BE STABLE AND MOBILE

With this trolley you can easily move your Euro Containers from A to B. The size of the trolleys is attuned for a basic measurement of 60 cm x 40 but can also be used for 2 containers with the dimensions of 40 cm x 30 cm.

- Highly robust, loading capacity 250 kg
- High quality, smooth running wheels

- Available with rubber or polyamide wheels
- Our polyamide version is also available with stainless steel blocks
- Trolleys are available with 4 steering wheels or with 2 fixed and 2 steering wheels
- Optionally with parking brakes or thread guards

Deeper insight – Maximum transparency

Rack- and
flow material
boxes

The greater the number of small parts you need for your daily work and the larger your range or inventory of unfinished products is, the more important it is to systematically and clearly store them in containers, in which you can always gauge the contents at a glance.

We therefore also offer the closed Euro container with cut-out side and viewing opening on the front, and of course the classic storage boxes with open fronts also form part of our product range.

The box-shaped racks and material flow boxes have an open front and can be fitted with sophisticated accessories for increased efficiency, for example with a transparent viewing panel, lateral and longitudinal dividers or labels.

Crystal clear tipping boxes offer maximum transparency.

EURO STORAGE CONTAINERS WITH OPEN FRONTS

READY-TO-HAND SYSTEM

Providing you with easy access to your products, tools, textiles, or bits and bobs!
Sturdy plastic containers with cut-out side for easy loading and unloading, even when stacked.

All versions are available with a cut-out opening in any size and shape
(also available on the long sides)

Particularly in the case of small parts or delicate contents, a transparent panel made of acrylic glass offers perfect protection to stop them falling out, getting dusty and suffering damage.

However, you can still see at a glance what is in which container (and how much). If required, the protective panel can be removed in one simple step.

DRAWER CONTAINER COMPLETE SYSTEM

ALWAYS ON HAND

Mobile, practical, robust and great value for money: thanks to the system's high loading capacity, the flexible drawer containers with their simple modular construction hold plenty of parts, sorted

neatly and always within easy reach. The drawers have stops to prevent them from sliding out and run very smoothly, even when full. The complete system is made up of a heavy-duty transport

trolley with four castors, a drawer container, two drawer holders with twelve insertion grooves and a set of six drawers.

- Total loading capacity: 70 kg
- 12 insertion grooves for drawers
- 6 drawers (2 x W172-t/2 x W84-t/ 2 x W24-t)
- Stops prevent the drawers from sliding out

TIPPING BOX

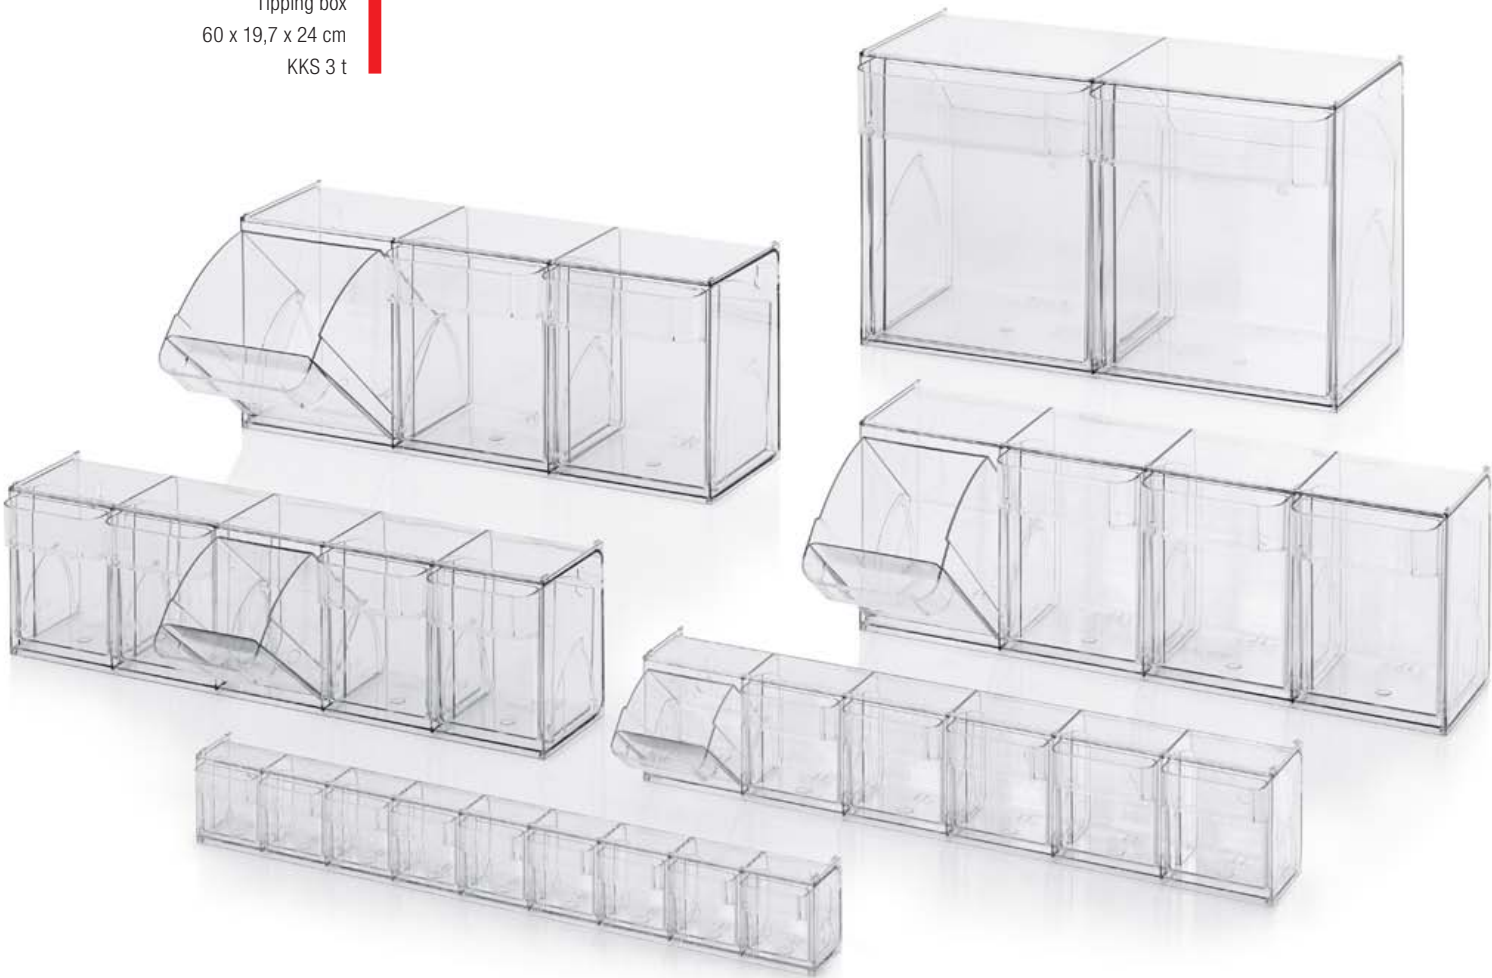

A CLEAR VIEW OF EVERYTHING

With this system you will always have a clear view of everything: the transparent tipping boxes make it easy to see whats inside. To fill or empty the boxes, they just have to be tilt forward but they will still remain save in their fixing module. With just one hand movement more you can also take the containers out of the fixing module - so you can be completely flexible.

- Made of transparent, scratchproof plastic
- Individual stackable or usable in wall mounting system

Flexible loading – optimised work operations

The AUER system trolley lends an additional helping hand for optimising your work operations:

Combine the various racks and material flow boxes and individually assemble your system trolley. The racks and material flow boxes are suspended on one or both sides in the aluminium profiles.

They are easy to insert and remove, exchange and fill when mounted. Despite their low weight, the system trolleys can carry extremely heavy loads and are also easy to roll when loaded. This enables your materials and workpieces to be transported quickly, safely, in the correct assembly and in sufficient quantities to precisely the workstation at which they are required.

System
trolley /
Shelves

SYSTEM TROLLEY FOR RACK BOXES

FOR OPTIMISED WORK OPERATIONS

How to get your rack and material boxes rolling: simply suspend them in the aluminium profile system exactly tailored for this purpose, and everything you need to work is clearly sorted and always in precisely the place where you need it.

- Depending on the version, can be loaded from both sides
- Stable aluminium profile construction
- High loading capacity
- Lockable easy running rollers

FULL TRANSPARENCY

The combination of tipping boxes and system trolleys ensures a complete overview and individual access. In the system trolley for tipping boxes, the various tipping box modules can be combined as desired and attached to the aluminium profiles on one or both sides.

- Depending on the version, can be loaded from both sides
- Stable aluminium profile construction
- High loading capacity
- Lockable easy running rollers

SAFELY HELD IN PLACE

The perfect stationary solution for assembling transparent AUER tipping boxes: sturdy aluminium profiles safely hold the practical helpers in place. Just one pull and the containers tip towards the user by approx. 45°, allowing the contents to be removed quickly and easily. The insert containers can also be completely removed if required.

Shelving systems for tipping boxes are available in a height of 1 m and 2 m and are designed for a module width of 59 cm. In terms of the width, any number of grid elements can be attached to one another. If you prefer wall mounting, the stands that come supplied as standard can be easily dismantled.

To individually configure and order your AUER shelving system, please use our online configurator at www.auer-packaging.com/en/system-shelving_207.html

Your shelving system in your personal configuration will then be delivered to you fully assembled.

- Sturdy aluminium profile design
- High load capacity
- Can be extended to the side as desired
- Element height of 1 or 2 metres
- Delivered fully assembled

SCHREINER QUALITY

The multi-layer board shelving systems for Euro storage containers can be individually configured and equipped. The sturdy body, made from 15 mm thick multi-layer boards with a white coating, can be ordered in any height and, in conjunction with a grid size of 40 cm for the effective width, can also be ordered in any width.

The drawers consist of high-quality, full-extension slides with ball bearings, which mean they run very smoothly, and Euro storage containers with basic dimensions of 60 x 40 cm. You can freely select the height and design (closed or open) of each individual container from our range of Euro storage containers, and there is a wide range of container colours for you to choose from.

To individually configure and order your AUER Multi-layer board shelving system, please use our online configurator at www.auer-packaging.com/en/multi-layer-board-shelving-system_209.html

Your shelving system in your personal configuration will then be delivered to you fully assembled.

- High-quality multi-layer boards, coated white
- Elegant white surface finish
- Easy-clean surfaces
- High load capacity
- Element height can be freely selected
- Delivered fully assembled

Better organisation in the container – with functional separating aids

Sort, fix, divide – systematic organisation not only ensures increased efficiency at your company, but it can also be a good idea to structure the contents of the Euro containers themselves using suitable aids.

For this task, AUER Packaging has developed a range of practical applications that leaves no sorting requirement unfulfilled. For example, dividers that are suitable for glasses or smaller workpieces are in particularly high demand. They are available both as finished standard products as well as individually configurable special compartments and dividers. Removable and insertable bins in various sizes are particularly ingenious, and individually formed workpiece carriers can also be produced.

COMPONENT HOLDERS

INDIVIDUAL MODELED

In order to provide your individual components for a smooth automated production process, we produce high quality customized component crates of plastic – at lower cost for small quantities! This allows precise

positioning of components as well as high repeatability in automation. Prices on request.

- minimum wear
- high mechanical resistance

Also in ESD-Version available.

Large when being used – **compact when empty**

Where to store containers once they have been emptied – for example between two production or transport cycles, or on an empty transport?

Folding boxes are available for those who do not want their empty containers to take up the same volume in storage or on the truck as they do when they are full. They can be collapsed to a fraction of their volume. When unfolded, they are on a par with the rigid containers in terms of stability and load capacity.

Functional detailed solutions, such as the red handle to quickly and easily unlock the folding mechanism, ensure maximised suitability for everyday use, high-quality workmanship and a long service life.

Foldable
boxes

The collapsible and foldable containers by AUER Packaging can be used in a variety of applications. They are space-saving, extremely cost effective and compatible with other re-usable packaging systems.

Our containers are light, and at the same time very stable, stackable and can be quickly and simple opened up and folded down.

- Secure, quick and simple to fold
- High reduction in volume (up to 82%)
- Ideal box for transports and consignment
- Simple and robust folding mechanism
- Easy opening and closing

SEAL

Article No.	Colour	Units in carton
PB	black	500

The background of the page features several blue reusable containers. On the left, two containers are shown in a perspective view, one slightly behind the other. On the right, another container is visible, partially cut off by the edge of the frame. The containers have a conical shape and interlocking lids. A red vertical band runs down the center of the page, containing the main text and logo.

Save space — with fresh ideas

Save space effectively even without the folding mechanism — the reusable containers manage this effortlessly with their slightly conical shape that allows them to be stacked inside one another very easily when empty.

With the aid of an additional trick, they can also be stacked when filled: two swivelling frames that can be integrated (optionally available) form a stable platform for the base of the next container when folded. When folded away, the frame enables the containers to be stacked inside one another.

Another interesting option is the stable lids that interlock with one another, allowing the containers to be stacked on top of one another. They are integrated so ingeniously into the container design that these containers can easily be stacked inside one another when empty as well.

Reusable
containers

ALL-ROUND STORAGE AID

Flexibility is the top priority in storage and transport. When empty, AUER reusable containers can be stacked inside one another to save space. In the home position, the optionally available frames allow the containers to be stacked inside one another, and when folded, the loaded containers

can be stacked on top of one another - even without lids. Thanks to their robust design, they allow for a high stacking height. The recess in the lids of the reusable containers offer a high stability.

- Saving volume during empty transport
- Up to 75% less empty volume

Even the huge Auer reusable containers, with a basic dimension of 80 x 60, can be stacked inside each other, thus saving space. Optionally available stacking frames enable you to stack the containers inside one another when the stacking frames are in the home position. When folded, the loaded containers can be stacked on top of one another - even without lids. Due to their stable design, large stacking heights

are possible. Additionally available optional equipment include hinged lids and skids. With its recess, the hinged lid offers high stacking stability. The skids facilitate efficient handling with lift trucks and fork lifters.

- Saving volume when transported empty
- Up to 75% less empty volume

Small load carriers – (not only) for the automotive industry

The high level of automation, the large number of units and a range of specifications for the automotive industry mean very specific requirements in terms of quality and functionality of small load carriers, which are used in the production chain.

The VDA (Verband der Automobilindustrie – German Automotive Industry Association) has therefore defined clear standards for such containers.

AUER Packaging consistently implements the VDA 4500 standards in its KLT series in tried-and-tested AUER quality that leaves nothing to be desired: the RL-KLTs feature drainage holes in the base. In cases where increased load-bearing capacity is required, the classic R-KLTs with closed base ribbing are called into action. And if saving space when empty is the top priority, folding KLTs are the first choice.

Small load
containers
/ KLT

R-KLT BOXES ACCORDING THE VDA-4500 STANDARD

FIT SEAMLESSLY INTO EACH OTHER

Our R-KLT mini-load containers are fully conforming to the standards of the Association of Automotive Industry (VDA). The fit perfectly for highly automated production processes and are equipped with an sturdy base ribbing. Stable impact surfaces on the front and the sides allow the use in mini-load system; lifting slots the vertical retrieval and special holes the fixing of lid sealings. Perfectly usable for manual handling due to their ergonomic grips at

the front walls and their practical support grips on the side walls. The mini-load containers are also available in foldable version. (Version-F-KLT)

- According to VDA 4500
- Material 100% Polypropylene
- Restistant to most oils, acids and alkalis
- Quiet running on conveyors

- Withstands temperature from -20 to +100 degrees Celsius
- Fully recyclable
- Easy cleaning due to smooth internal walls
- Integrated lid slots
- Barcode fixing area

Also in ESD-Version available.

LIDS FOR R-KLT

Standard colour: sapphire blue **RAL 5003**

Article No.	For basic dimension L x W (cm)	Units on pallet
R-KLT-D 35	30 x 20	1600
R-KLT-D 45	40 x 30	800
R-KLT-D 65	60 x 40	600

The matching lids for the R-KLT series are likewise made of 100% PP and have a tight seal when closed to keep dust out. The containers can also be stacked with lids on.

MATERIAL FLOW CONFORMING TO THE VDA STANDARD

Our RL-KLT containers with a smooth sub-floor and waterdrainage holes in the base can ideally be used for areas where liquids (e.g. of cleaning processes, or individual production stages) shall be drained off. Stable impact surfaces on the front and the sides allow the use in mini-load system; lifting slots the vertical retrieval and special holes the fixing of lid sealings. Perfectly usable for manual handling due to their ergonomic grips at the front

walls and their practical support grips on the side walls.

- According to VDA 4500
- Waterdrainage holes in the base can be supplied according to VDS classification directive BG 4.3.
- Material 100 % Polypropylene
- Resistant to most oil, acids and alkalis
- Quite running on conveyors, when used correctly

- Retains its stability at temperatures from -20° to +100° C
- Fully recyclable
- Easy cleaning due to smooth internal walls
- Integrated lid slots
- Barcode fixing area

Also in ESD-Version available.

FOLDABLE KLT SERIES ACCORDING THE VDA-4500 STANDARD

MAXIMUM EFFICIENCY

AUER Packaging has taken the idea of automation-compatible small load carriers for the automotive industry one step further: If storage areas and loading bay capacity for empty containers currently not required become a cost factor, the foldable KLT series can generate effective savings. The foldable small load carriers combine the benefits of the KLT series with the spacial economy of folding boxes.

- Volume saving of approx. 70% when folded
- Material 100% Polypropylene
- Resistant to most oils, acids and alkalis
- Quiet running on conveyors
- Withstands temperature from -20 to +100 degrees Celsius
- Fully recyclable
- Easy cleaning due to smooth internal walls
- Integrated lid slots

Big boxes – for big tasks

Our large load carriers are configured around the base dimensions of the two established Euro (120 x 80 cm) and ISO (120 x 100) pallet standards.

These containers rightly carry the label "big boxes": the largest AUER big box can accommodate a volume as large as 900 litres!

Even fluids can be easily stored and conveniently removed again with optionally available valves. We cut the thread required for this ex works for you, and suitable screw caps are also available for watertight sealing.

All our models are available in a version with four support feet as well as a version with three skids for forklift handling. For effortless movability by hand, roller sets with rubber wheels can be fitted and the big boxes can be covered with practical loose lids.

BIG BOXES CLOSED

ROBUST IN LARGE SIZE

The Big Boxes are made of a robust, scratch-resistant plastic material. Smooth inner and outer walls ensure easy cleaning.

Standardized dimensions (Euro 1,200 x 800 mm or ISO 1,200 x 1,000 mm) ensure smooth operation in storage and transport processes.

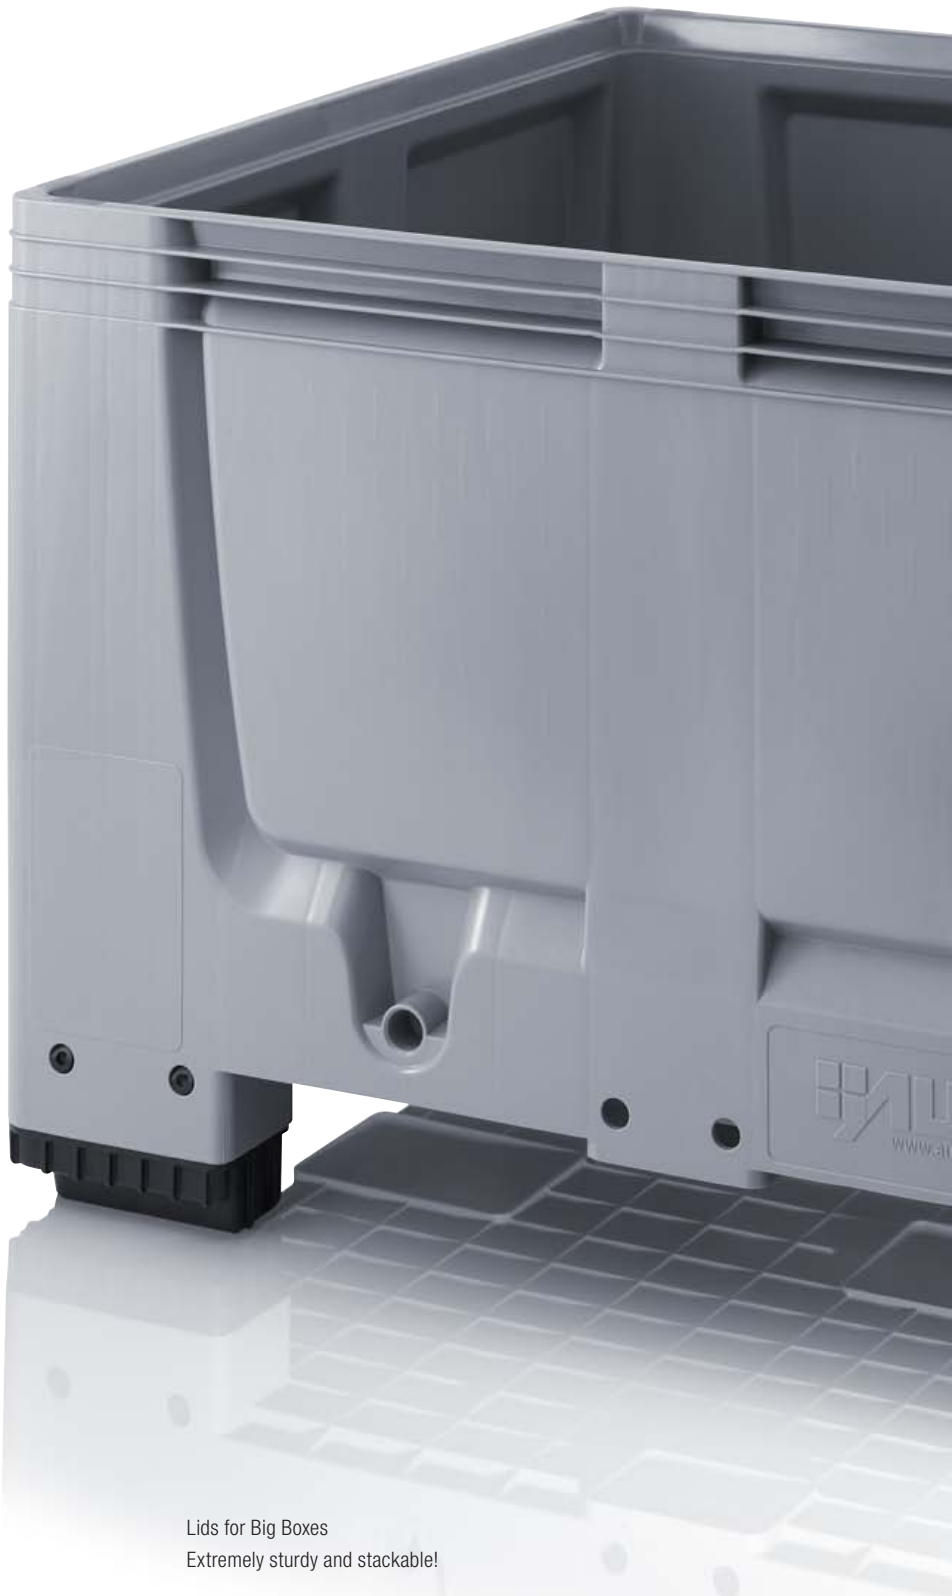

- Also stackable with lid
- Superimposed load 4 tonnes
- ISO and EURO dimensions
- available with feet, skids or wheels

Sophisticated and functional – **big boxes with folding mechanism**

Whatever folding boxes in the Euro container segment can do, collapsible big boxes offer the same in a large format:

the four side walls can be unlocked and folded inwards, enabling the big boxes to be reduced dramatically in size when emptied. This saves a great deal of storage space and empty transport costs!

But that's not all: additional cut-out flaps (optionally available) on the sides facilitate easy access to the contents and convenient loading. Of course, all options such as support feet, skids for forklift handling, rubber roller sets and loose lids are also available for the collapsible big boxes.

Collapsible
Big Boxes

OUR POSSIBILITIES OF COMBINATION

YOUR TAILOR-MADE BOXES!

You would like to get your foldable bigbox with different walls - e.g. one side with a flap, another one perforated and the third one closed? No problem, we will assemble your bigbox as desired! The best of all is: you will not have to pay any extra charge for this packing - all components will be charged with the usual list prices.

COLLAPSIBLE BULK CONTAINERS

PROVE REAL GREATNESS

The collapsible large load carriers from the GLT series consist of hygienic and insulated containers that are safe for use with food, available in the AUER Packaging range. These containers feature smooth outside and inside walls and can therefore be cleaned easily and profoundly. The throughout double-walled side walls ensure an effective isolation of the contents. The lids of the GLTs can be locked and sealed making unauthorized opening impossible.

- ideal for transporting and storing food
- very hygienic because of easy cleaning
- isolated against heat and cold by double-walls
- space-saving when empty
- cost advantages in re-transport due to volume reduction
- also stackable with lids
- highest possible security to prevent unauthorized opening

CLOSING SYSTEM

FOR COLLAPSIBLE BIG BOXES

Secure valuable or sensitive goods reliably from unauthorized persons! With our locking-systems your foldable bigboxes are on the safe side, already when being delivered, as the locking-system will directly being assembled in our factory.

Please note:

- All solutions, except of the pad lock with eyebolt SC, can only be mounted on side-walls without flaps.
- Hinges are only mouted on the long sides of the boxes
- If a container is equipped with hinges,

the padlocks should only be fixed opposite the hinges.

Toggle-type fastener SV

Hygienic and safe – the solution for liquid goods

Do you often have to transport fluids or substances in paste form, and are looking for an efficient solution for this?

The IBC containers ("Intermediate Bulk Containers") from AUER Packaging combine the robust quality of our large load carriers and the functional reusable handling of collapsible containers with the hygiene and cost efficiency of disposable plastic containers that are safe for use with food (also aseptic on request): Your goods are safely packed in so-called liner bags and securely enclosed in a stable container.

After use and emptying, the liner bag is simply removed, the collapsed container transported back and loaded once again with a clean liner.

BAG IN BOX SYSTEM / IBC

COLLAPSIBLE, FOR LIQUIDS

By using a single use liner bag, the Auer IBC-System offers a very hygienic and safe solution, including the option of aseptic liner.

Advantages compared to traditional non returnable or rigid systems:

- Significant reduction in transport costs
- Reusable container (only the liner bag is disposable)
- More hygienic due to smooth surfaces and rounded off edges
- Double skin design of IBC walls gives excellent product protection against fork impact. RFID technology available for track and trace of your asset

- User friendly filling and discharge methods. Safe and easy to transport
- Optimal space utilization – stackable and collapsible
- Single use liner eliminates expensive cleaning costs and associated operational time
- Extended shelf life for product filled aseptically, even if part discharged
- No pressure balance necessary
- One man operation
- High stack load rating
- Inclusive sealable lid

Reinforced side walls for strength and stability

Three runners for use with all materials handling equipment

FEATURES AND BENEFITS

- All IBC containers are delivered with lid and outlet. Liner bags have to be ordered separately.
- Stackable – saving valuable racking space

■ Reusable – saving costs vs. single use alternatives
- Foldable – saving space in storage and on return transport

■ Hygienic – easy to clean smooth surfaces
- Economical – transport amortisation favourable vs. rigid alternatives

■ Easy to use – operational savings and higher yield potential

Plastic pallets – the smart alternative

They are considerably lighter than wooden pallets, no splinters can contaminate your product, no germs or mildew can contaminate your production and, as they are made from just one piece, there are no protruding nails:

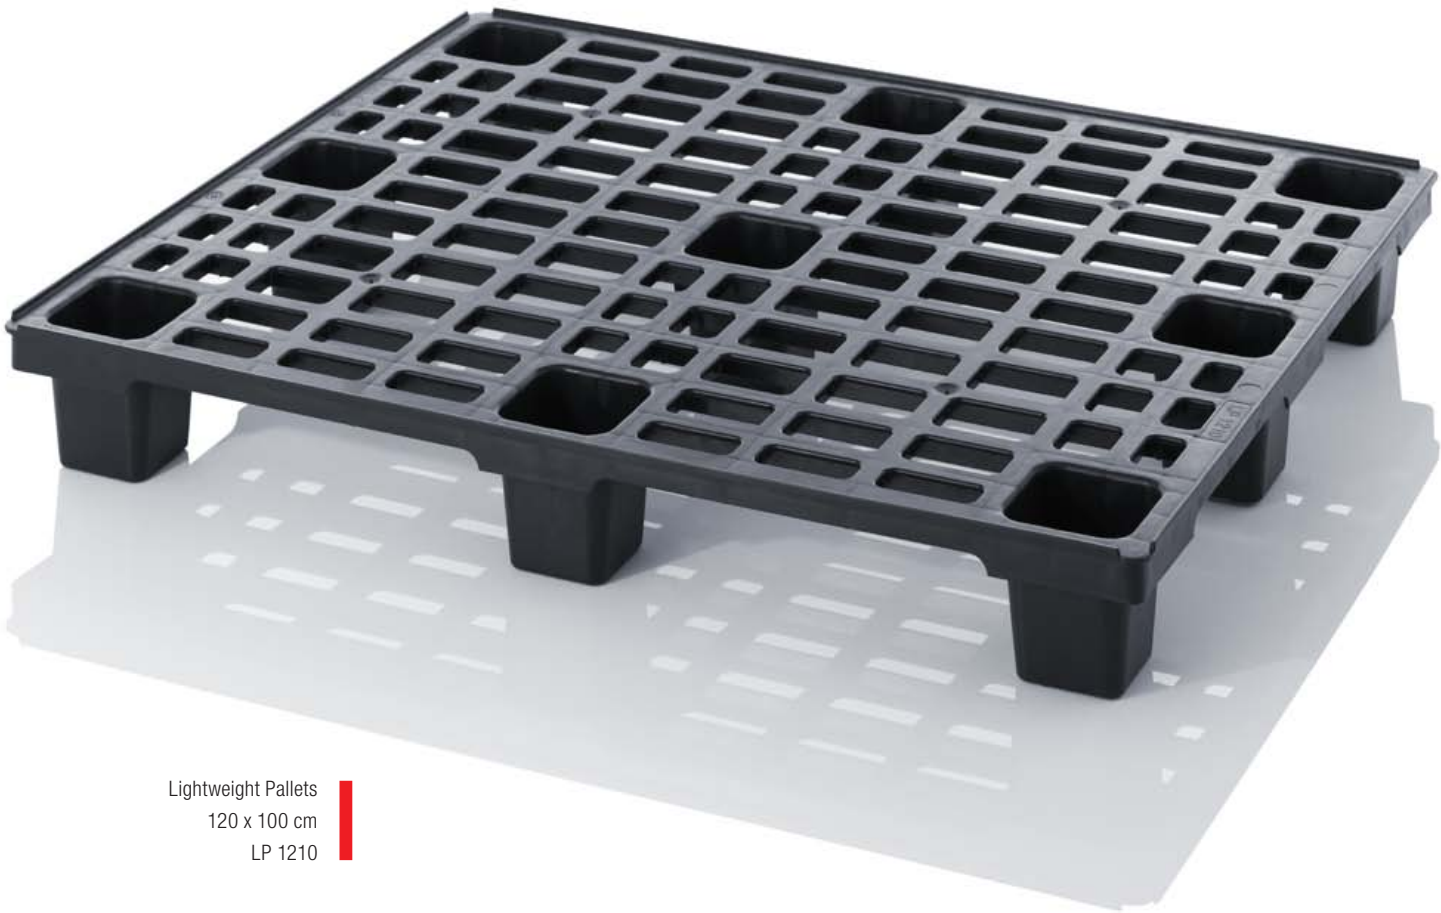

plastic pallets are superior to their wooden counterparts in many respects!

If your priorities are hygiene, suitability for use with foodstuffs or cleanroom suitability, we can offer you plastic pallets specially optimised for these purposes. The steel tube reinforced heavy-duty models are designed for extreme loads. For structural reasons, they are exclusively fitted with skids. You can order our other pallets with support stands instead of skids.

LIGHTWEIGHT PALLETS WITH FEET

ROBUST LIGHTWEIGHTS

Our lightweight plastic pallets can be stacked one into the other to save space. They have a high load-bearing capacity, despite their low empty weight. Suitable for worldwide export.

Lightweight Pallets

Also available without outer retaining edge (side edge).
Further information at www.auer-packaging.com

THE STABLE ONES

Due to the skids, our lightweight pallets become even more stable as well as the torsional stiffness increases. Especially high weights, this pallets can be perfectly moved with fork lifters.

Your load – safe from electrostatic charges

The ESD versions of the Euro containers, box inserts and pallets from the AUER Packaging range serve to protect electronic equipment and components.

With their specifically defined volume and surface resistance, they prevent your goods from becoming electrostatically charged, and divert any electrostatic charge.

ESD-
Products

ESD EURO CONTAINERS

ABSOLUTELY ANTISTATIC

The ESD containers made of conductive plastics were especially designed for transporting sensitive electronic devices. They reliably prevent electrostatic charge and divert already existing charges. Special volume resistivity/surface resistivity: $10^6 < 10^{10}$ Ohm cm

MOBILE ORGANISATION

ESD Euro containers are also becoming mobile: the ESD system trolley version for Euro containers is the solution if you require the contents of several containers at different locations. It makes the inconvenience of having to reload onto pallets for transport by forklift truck or carrying around by hand a thing of the past! All plastic components incl. the rollers are made from electrically conductive plastic.

- Stable aluminium profile construction
- High loading capacity
- Lockable easy ESD running rollers

ESD-
Products

ALWAYS ON HAND

Mobile, practical, robust and great value for money: thanks to the system's high loading capacity, the flexible ESD drawer containers with their simple modular construction hold plenty of parts, sorted

neatly and always within easy reach. The drawers have stops to prevent them from sliding out and run very smoothly, even when full.

■ Stops prevent the drawers from sliding out

ESD R-KLT BOXES

FIT SEAMLESSLY INTO EACH OTHER

The ESD containers made of conductive plastics were especially designed for transporting sensitive electronic devices. They reliably prevent electrostatic charge and divert already existing charges.

The fit perfectly for highly automated production processes and are equipped with an sturdy base ribbing. Stable impact surfaces on the front and the

sides allow the use in mini-load system; lifting slots the vertical retrieval and special holes the fixing of lid sealings. Perfectly usable for manual handling due to their ergonomic grips at the front walls and their practical support grips on the side walls.

Special volume resistivity/surface resistivity: $10^6 < 10^{10}$ Ohm cm

- Quiet running on conveyors
- Easy cleaning due to smooth internal walls
- Integrated lid slots
- Barcode fixing area

ESD R-KLT Boxes

ESD COLLAPSIBLE CONTAINERS

UNFOLDING POTENTIAL

The foldable and collapsible ESD containers from AUER Packaging are space-saving, extremely cost-effective and compatible with other reusable packaging systems. Our containers are light, and at

the same time very stable, stackable and can be quickly and simple opened up and folded down.

- Secure, quick and simple to fold
- High reduction in volume (up to 82%)
- Ideal box for transports and consignment
- Simple and robust folding mechanism
- Easy opening and closing
- Sealable (only with lid)

Round or oval – pails with lids

Not only for wall paint: anything in a solid, fluid or paste state is in the right place in AUER Packaging pails.

The product range comprises a wide selection of round pails in various sizes, as well as the classic oval pails of approx. 39 x 30 x 27 cm. All sizes are supplied including tight-closing lids and sturdy carrying handles. On large volume pails, the handle is made of a metal bar with a plastic coated section in the middle so that it may be carried comfortably.

Take advantage of the option to order the pail in your company's corporate colour and with a customised imprint – customisation lends itself especially well to large volume articles such as pails and ensures a strong appearance of your brand!

PACKAGING

PAILS WITH LIDS

KEEPING GOOD THINGS SEALED

Our plastic buckets are suitable for storing and stocking solid and fluid materials. They are made of polypropylene (PP) and in most cases have a unique closing system. Approved

for the food industry and fitted with anti-lid lifting protection and the rim sealing system, this container is a widely versatile packaging medium.

THE NEXT GENERATION

The standard colours of the next-generation pails are white and transparent. They boast an impressive range of innovations:

Pails and handles in different colours can be produced by computer. The

Inmould labelling process allows many more design options for the inscription. And with the AUER tamper-proof seal, the recipient can be 100% certain that the lid has remained closed since the moment it was sealed.

- Standard colours are white or transparent
- Pail and handle can be produced in different colours
- Also available in an oblong form
- High-quality, protected printing using the Inmould process
- Maximum security due to tamper-proof seal
- Impermeable to liquids in accordance with AUER endurance test

Rain water — drained in a controlled manner

If green areas are sealed by building projects, the rain water can only run sideways and seep away.

The legislator stipulated several years ago that, in cases such as these, underground soakaway systems are to be set up, in order to be able to control how the water masses are absorbed and drained.

For such purposes, AUER Packaging has developed a range of trenching systems with extensive accessories. When correctly designed and assembled, they not only satisfy the specifications for the drainage of rain water, but also the structural requirements for driving over the surfaces under which they are installed.

Rainwater
soakaway
Rigoletto

RAINWATER SOAKAWAY RIGOLETTO

OPEN ON ALL SIDES

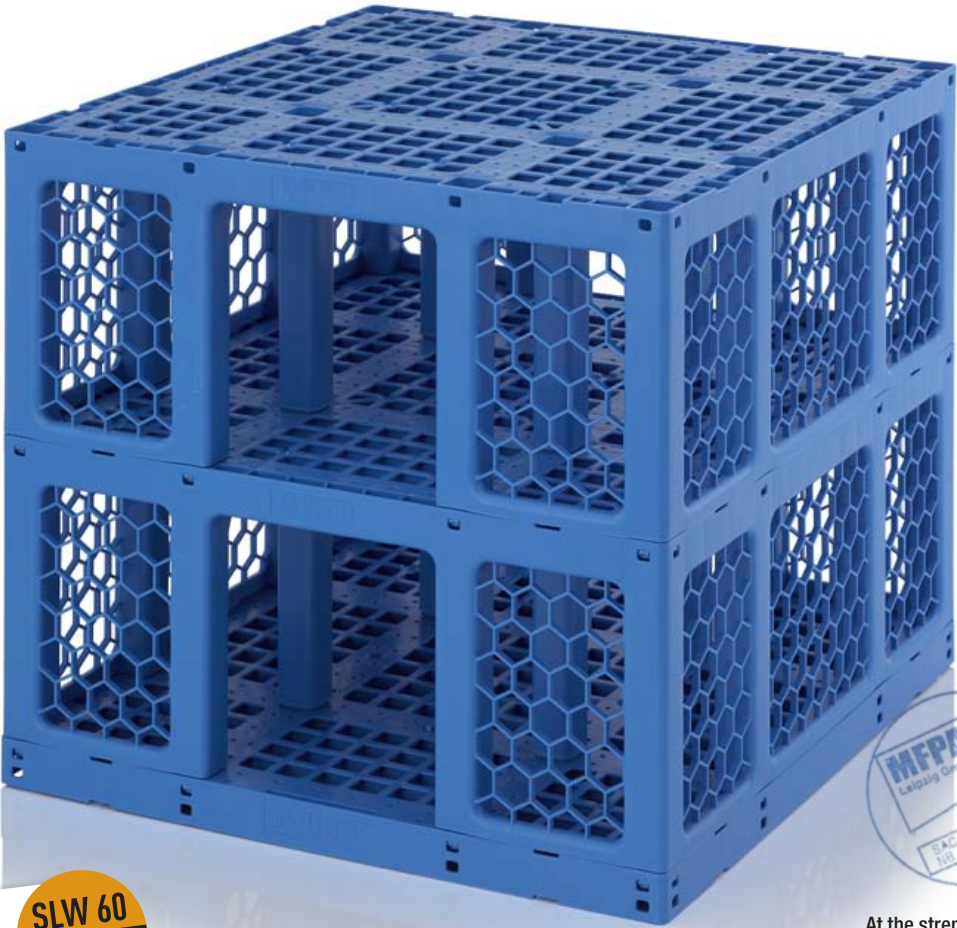

The AUER Rigoletto soakaway fulfils the current strict guidelines for the gravel-free drainage systems that are advised when constructing sealed surfaces.

The core of the system is a heavy-duty blue trenching support medium made from polypropylene with a hollow space proportion of 95%.

It features pipe connections for KG DN 150, 200 and 250 on the side, through which water can pass in three spatial directions with almost no resistance, and can be combined as required.

A continuous inspection tunnel allows the use of automotive camera dollies with a camera size for pipes from DN 150. The inspection tunnel features wide-meshed grates on the side which serve to control the permeable exterior surface as well as the entire trenching volume with all statically relevant supporting elements.

The trenching system is designed for professional approval inspections and repeat inspections. It can also be installed under traffic areas and at great depths.

HIGH RESISTANCE
suitable for a traffic and ground load until 60 SLW (heavy trucks of 60 tons)

SLW 60
Truck 60t

At the strength testing, made by the MFPA, our Rigoletto inspection block showed its high vertical and horizontal loading capacity.

80 x 80 x 35	RG88-G	Rigoletto inspection canal closed	8
80 x 80 x 5	RG88-GP	Rigoletto base plate	52

To complete the inspection tunnel there are suitable front wall grids available. Front walll adaptars are provided for the direct pipe connection, which just have to be clicked onto the front of the Rigole.

Block connectors are used to secure the position of the Inspection Block Rigoletto during the installation. The block connectors are in the middle of the wall for mounting.
