

propasil®

To solve problems caused by:

Atmospheric agents

Climatic conditions

Humidity

Salt air

Condensation

Prevention in any condition

PROPASIL products are desiccant bags made from semi-transparent amorphous silica gel. Its moisture-absorbing capacity is very high and changes according to the environmental conditions.

PROPASIL was developed to protect the product from damages caused by moisture. Thanks to its absorption capacity, **PROPASIL** lowers humidity inside the packing during transport and storage, thus reducing the risk of reaching the dew point and preserving the qualities and properties of your goods.

PROPASIL desiccant bags are available in various weights and versions. **PROPASIL micro** range is the best solution for reduced spaces. Extremely practical and highly absorbent products. It is the ideal solution for the smallest humidity problems. Being highly compact it occupies minimal space within the package, while effectively absorbing the residual internal relative humidity.

PROPASIL micro is available in sizes from 0,5 to 3 g.

PROPASIL is available in canisters and in capsules of different weights, certified **US DMF** and **FDA** approved. Thanks to their small dimensions they are perfect to absorb the excess humidity in small spaces as inside the containers and vials of medicines or dietary supplements.

PROPASIL range can be supplied in bags, chains or panels.

Main applications:

- Electronic equipment
- Pharmaceutical products
- Dietary supplement
- Vitamins
- Food packaging
- Medical devices
- Medical diagnostic equipment
- Optical instruments
- Products made of leather, suede etc...
- Industrial packaging

CERTIFICATIONS AND REGULATIONS

PROPASIL is certified according to NFH and MIL standards. **PROPASIL** can also be produced according to FDA standard for food and pharmaceutical contact.
