

ABS SafetyHike

Vertical lifeline for permanently installed ladders

Safe right to the very last rung: Our ABS SafetyHike system is a fall protection solution with an integrated vertical rope guide. With its practical rope glider and easily traversable intermediate brackets, this system is a synonym for ultimate safety on permanently-installed vertical ladders. Compared to other vertical lifeline solutions, our ABS SafetyHike offers one decisive advantage: The upper end can be equipped with a 130 cm-long protrusion module. This guarantees that you can get on and off safely.

Our ABS SafetyHike is screwed straight onto the ladder which saves drilling into the facade. This vertical lifeline system is manufactured from stainless steel and fulfils the requirements set down in the PPE directive. It has been licensed and tested in accordance with EN 353-1:2018 (incl. in former times CNB/P/11.073). Each vertical lifeline glider secures 1 individual. A total of up to 2 individuals can use the system at any one time.

- EN 353-1:2018 (incl. in former times CNB/P/11.073)
- Suitable for simultaneous usage by 2 individuals (1 person per glider)
- Fixed guide with stainless steel cable (8 mm)
- A range of top section protrusions available - up to 130 cm
- Specially-designed vertical ladder glider with a blocking mechanism to apply the brakes in the case of a fall
- For rungs measuring max. 3.5 cm x 3.5 cm; other sizes available upon request
